- 20 A Martian Football Team might have ONE of these.
- 23 Name for Red Planet Racers
- 27 A founder who rang true.
- 29 System 1-3 used these computers

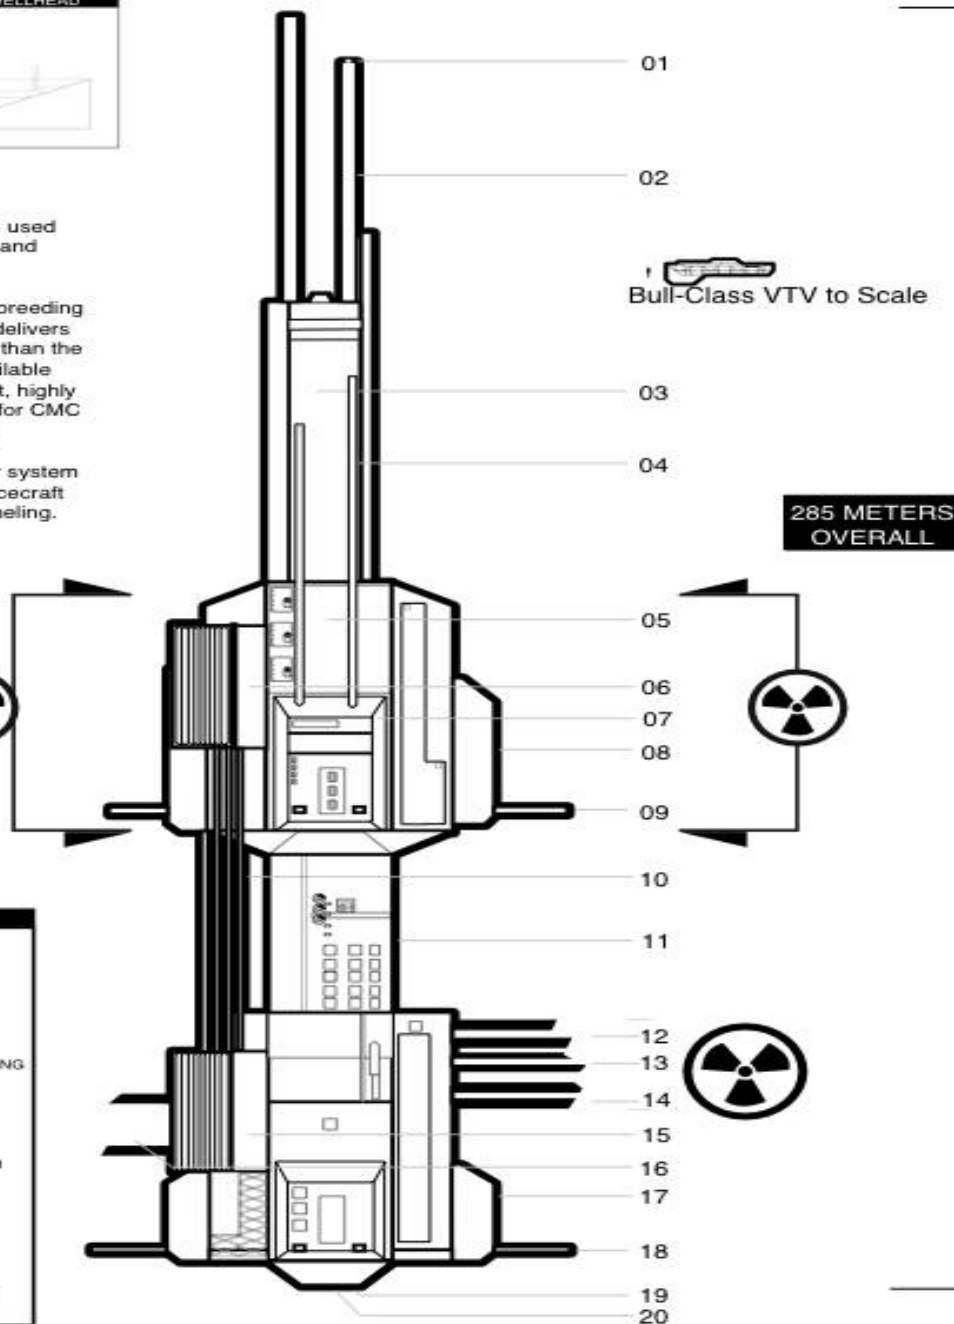

NOTES

The MK XVI Mining Laser Drill is used principally to deep drill for water and Martian Crude.

The System incorporates a fast-breeding SPIKE II Fission reactor, which delivers a higher specific output per cost than the more complex commercially available Fusion Reactors. The by-product, highly enriched plutonium, is collected for CMC Resources Division twice yearly.

Solid-State Tunable-beam Laser system is of the same type used for spacecraft launch operations and mine tunneling.

Typical Installation

Color the harmless CMC Equipment!

CEREBUS PLANETARY DEFENSE BASE.

Coordinates: 75°N, 57°W

Climate: Arctic Tundra

Local Geologic/Magnetic Anomalies: Local irregularities may result from near surface deposits of magnetite in the region.

Political Affiliation: Ducky of the FedCon

The Cerebus Planetary Defense Base is one of the polar outposts of the planet's public. The base was established as a critical component of an orbital defense strategy, and in under 25 years ago. The strategy calls for extensive ground to orbit defense bases in the Arctic and Antarctic continents. These bases are intended to be launched at approaching deep space before they can launch themselves. The only way to defend this strategy is to find several small drop sites that are just past the orbital horizon and then attack the bases from the ground. Over the years, the bases have been built in such a way that they are now almost impossible to find.

The feeding operations of the polar outposts are great for the waste management, but the rough and rugged terrain makes it a difficult place to construct. The lighting conditions change drastically in the time of the orbital debris or the rest of the former scenario. There have been a lot of times that the bases have been built in the most beautiful place to fight.

Planet Fafnir

Primary Star: Arctis

Mean Distance:

From Primary: 156.7 million km

of Moons: 3

Diameter: 11,824 km

Mass: 4.2873 x 10²⁶

Orbital Eccentricity: .075

Axial Tilt: 30°

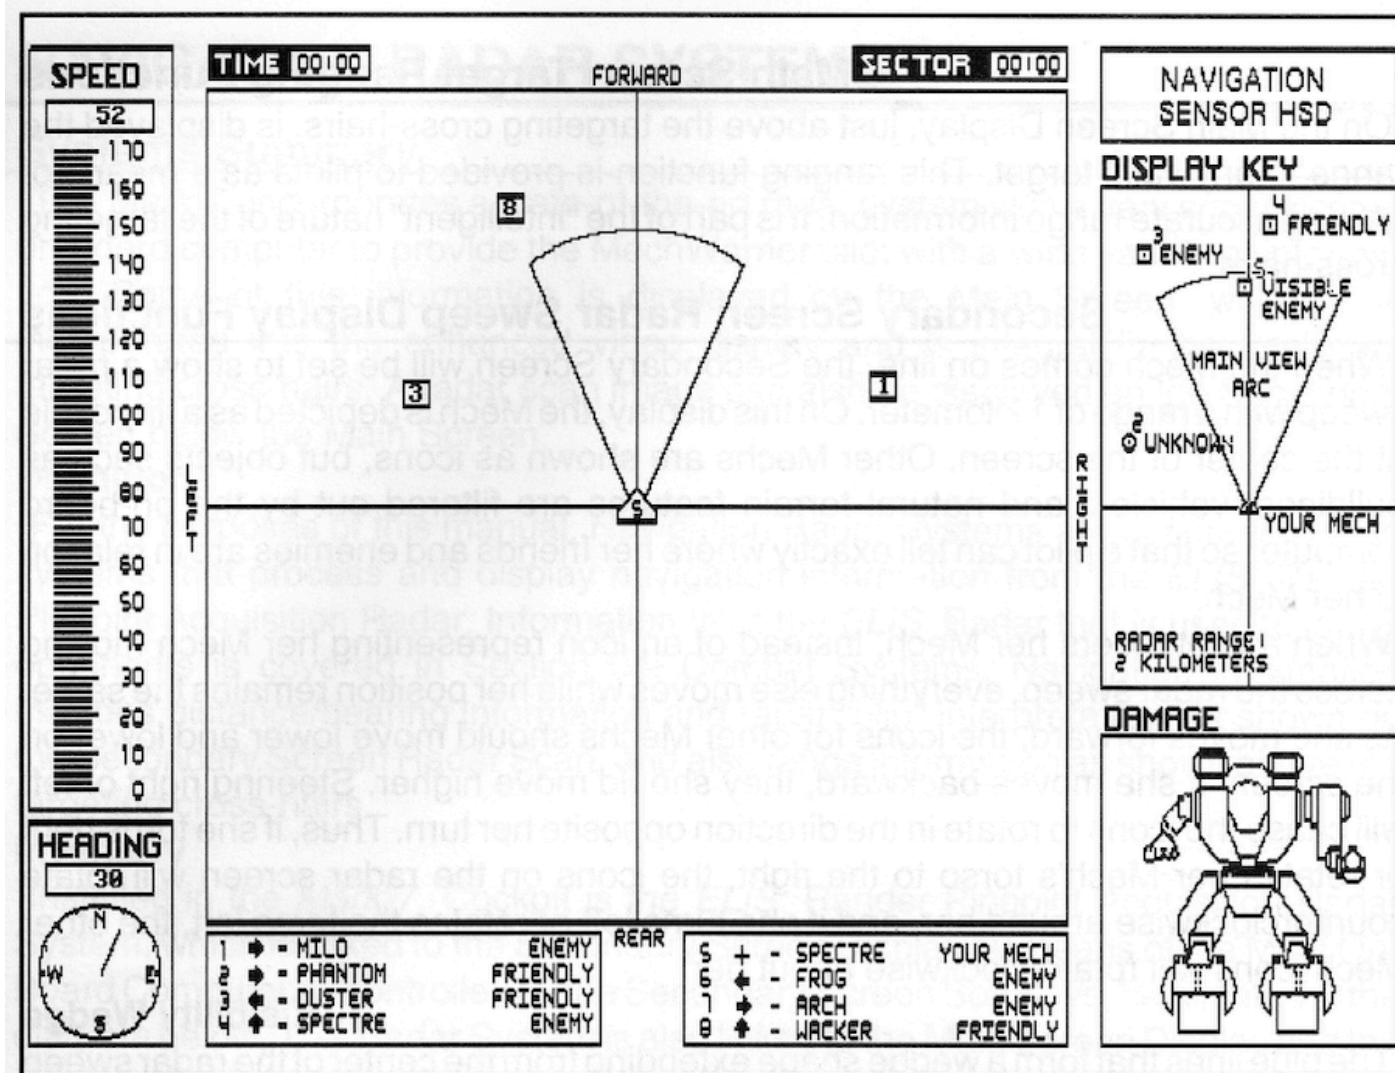

Planetary Year: 380 days

Planetary Day: 21 standard hours
